

sustainability statement

OE Electrics Ltd recognizes its responsibility to conduct business in a way that protects and improves the state of the environment for future generations. As a global firm, we understand that the long-term well-being of society, the well-being of our employees, the strength of the global economy, and the continuing success of our own business depend on our commitment to a sustainable environment.

OE Electrics Ltd has for many years conducted business and implemented strategic and operational decisions with environmental sustainability as a core corporate principle. We are committed to integrate environmentally friendly policies and practices into our organization by operating in a manner that promotes energy and materials conservation, as well as waste reduction. We are also committed to assist our clients in analyzing, reducing, and managing their own environmental impact and risks.

Our sustainability program has three components, all based around a rationale of continuous improvement:

A commitment to reduce the environmental impact of our own activities, by using 100% recyclable materials throughout the production process, recycling all waste (steel, aluminium, plastic and paper/card), minimising energy and water usage throughout the company and, where possible, completely designing out certain processes and minimising parts

A commitment to provide our clients with the expertise, advice, products, and solutions that help them with their own sustainability challenges, including the development of energy saving solutions (eg: ELSAVE) thereby allowing our clients to improve their sustainability rating with schemes such as BREEAM.

A commitment to provide our employees with an environmentally conscious workplace, and where refurbishment or new builds are planned, to incorporate measures to improve the workplace, save energy and protect the environment.

As a global firm, OE Electrics Ltd will continue to work to develop and implement environmentally responsible business practices throughout our organization and strive for the sustainable growth of both our own and our clients' businesses. We encourage our employees to join us in the journey by supporting and furthering our environmental efforts.
